Paper No(s)/Mail Date	6) Other:				

The following is a quotation of the first paragraph of 35 U.S.C. §112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it in such full, clear, concise and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 10-12 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim 10 recites the term "signs". Applicants are requested to point to the page and line number of the originally filed disclosure where this term is used.

4

Claims 1-15 are rejected under 35 U.S.C. §112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification fails to teach the skilled artisan to use the compounds (to which the claims are directed) for treating psoriasis, dermatitis, acne, seborrhea, light-induced aging, chronological aging, or hair loss. In fact, the specification fails to teach the skilled artisan to use the compounds for any purpose. No data

is presented, there is no guidance and no working examples. Accordingly, "undue experimentation" would be required to practice the claimed invention.

It is noted that in parent application 09/379308, a declaration was submitted which presented results of *in vitro* studies, and offered general conclusions based In that declaration, an "AC50" parameter for two compounds was thereon. provided. The declaration also asserted that using assays described in Levin (Nature 355 359, 1992) and in Allenby (Proc. Natl. Acad. Sci. 90, 30, 1993), two of the compounds (of the instant claims) were tested for RXR binding, "RXR transactivation", and "RXR transactivation AC". It was never made clear what was meant by "RXR transactivation", or "RXR transactivation AC". The declaration also made reference to Safonova (Biochem Biophys Res Commun 204, 498, 1994), although no page numbers were given. Reference was also made to Hong (Retinoids and Human Cancer, 1994), although no page numbers were given.

However, with or without the above-referenced declaration, enablement is lacking for the claimed invention. In the event that a declaration is submitted (identical to or different from that submitted in the parent application), the specific assertions made therein will be addressed at that time.

**\*** 

The two Chem Abstracts citations were stricken from the IDS because they were not received.

No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Lukton whose telephone number is 571-272-0952. The examiner can normally be reached Monday-Friday from 9:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jon Weber, can be reached at 571-272-0925. The fax number for the organization where this application or proceeding is assigned is 571-273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571-272-1600.
